

Slab-SVM for Implicit Surface Modelling

Michael Rawson
Computational Machine Learning

Introduction

- How to make a model in a simulator?

1.2 Fluid–structure interaction in aeroelasticity

Fig. 1.3 The structural and aerodynamical model of a modern aircraft.

- Start with a point cloud

Problem Formulation

Let's pick a hyperplane (Gaussian kernel) that the points (nearly) go through.

Minimize norm of the function to find unique solution.

$$\begin{aligned}
 &\underset{\mathbf{w} \in \mathcal{H}, \boldsymbol{\xi}^{(*)} \in \mathbb{R}^m, \rho \in \mathbb{R}}{\text{minimize}} && \frac{1}{2} \|\mathbf{w}\|^2 + \frac{1}{\nu m} \sum_i (\xi_i + \xi_i^*) - \rho \\
 &\text{subject to} && \delta - \xi_i \leq \langle \mathbf{w}, \Phi(x_i) \rangle - \rho \leq \delta^* + \xi_i^* \\
 &\text{and} && \xi_i^{(*)} \geq 0.
 \end{aligned}$$

Quadratic Programming:

$$\min_{x \in \mathbb{R}^d} \frac{1}{2} x^T Q x + c^T x$$

$$\begin{aligned} l^c &\leq Ax \leq u^c, \\ l^x &\leq x \leq u^x \end{aligned}$$

Dual Problem:

$$\min_{\alpha \in \mathbb{R}^d} \frac{1}{2} \alpha^T K \alpha + [-\delta \dots -\delta] \alpha$$

$$\begin{aligned} 1 &\leq [1 \dots 1] \alpha \leq 1, \\ \frac{-1}{vm} &\leq \alpha_i \leq \frac{1}{vm} \end{aligned}$$

Previous Work: Datasets:

Issue:

Scaling $\sim O(n^3)$

From inverting the kernel matrix for Newton's Method (convergence $\sim O(n \ln(1/\epsilon))$)

- Optimizing Primal or Dual Problem

Multi-Scale Approach

Epsilon Insensitivity:

- Randomly select small subset of points to train off.
- Add unseen points, measure error (residuals), and correct.

Not suited for sufficiently complex surface given some data size.

Low Rank Kernel

Kernel Matrix $\sim O(n^2)$ in size

Kernel Matrix Approximation $\sim O(n k)$ in size, where k = significant eigenvalues

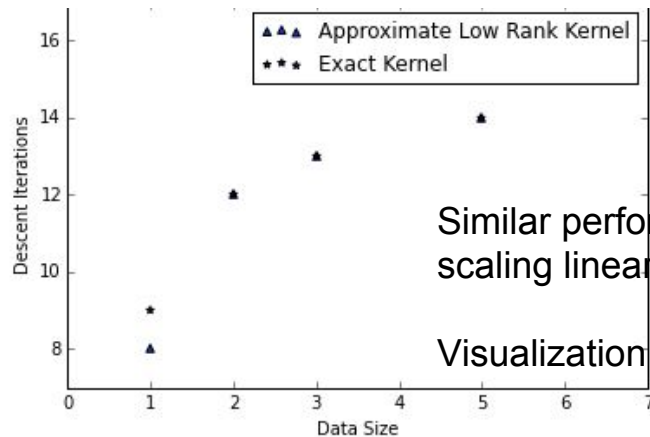

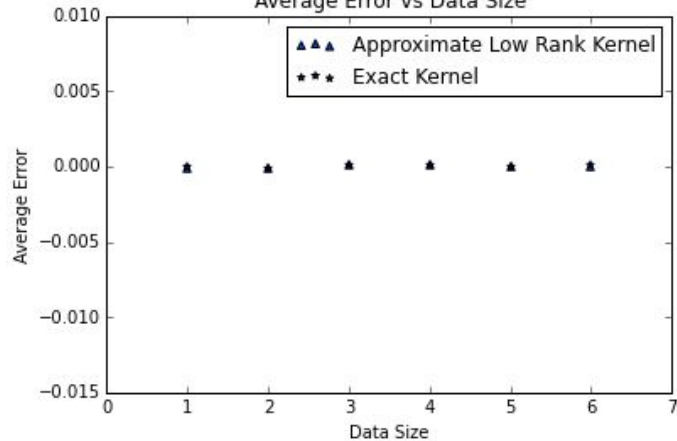

Decompose Kernel Matrix $\sim O(n k^2)$

- Apply Incomplete Cholesky Factorization with Symmetric Pivoting
 - Only consider large eigenvalues.

Zero Eigenvalues give instability.

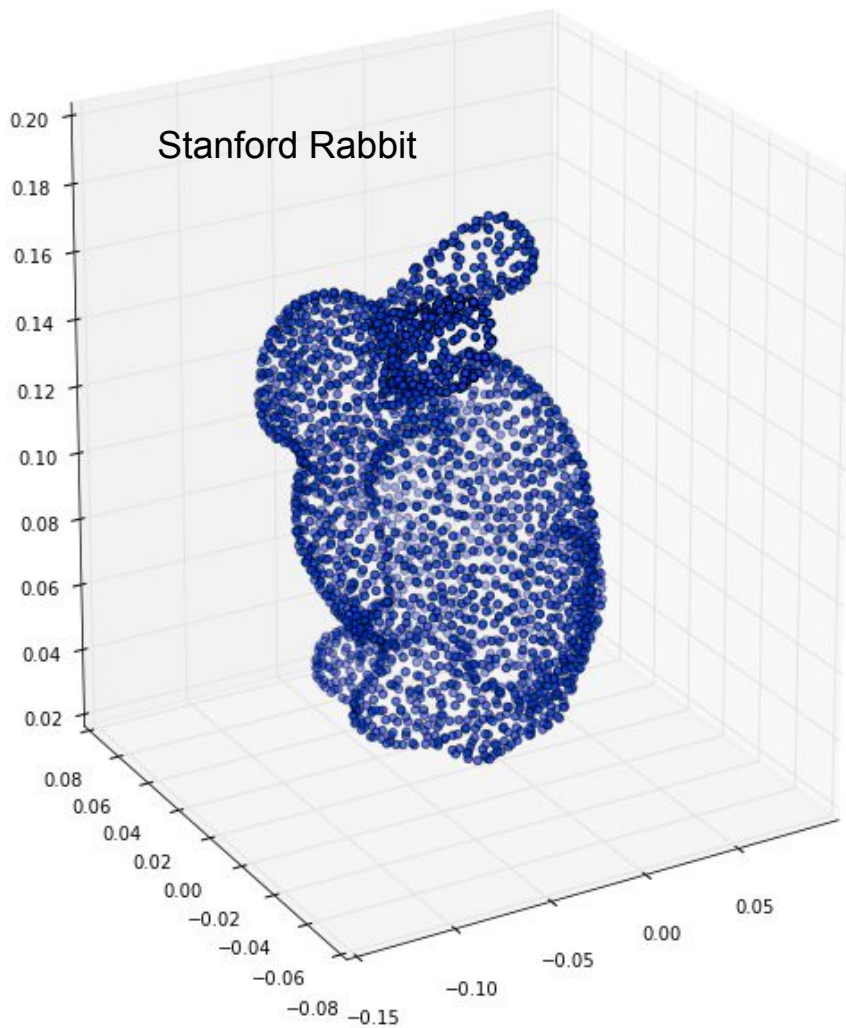

Experiments

Average Error vs Data Size

Similar performance yet
scaling linearly.

Visualization to come.

Future Work

- Numerical Stability
- Surface Normals
- Sharp Edges/Singularities
 - Gaussian radial basis function is always smooth
- Layered Surfaces
 - Magnetic Fluids
